In-Line Vent Valve

Wager's In-Line Valves protect tanks and bulkheads from pressure or vacuum buildup during loading or unloading of tanks, and are used in locations where operations require an in-the-line vent check valve rather than a terminal vent valve.

The ball check prevents contamination of tank fluids by water during rough seas. A fine mesh flame screen protects tank gases from igniting when subject to a deck fire. The vent is available less a screen where a low pressure vertical ball check is the only requirement.

Available in cast bronze, aluminum or steel.

Specifications:

1300 In-Line Vent Valve

Body:	Aluminum, Bronze, Steel
Connections:	Flanged
Float Materials:	Stainless Steel, Copper, Polyethylene
Flame Screen:	Stainless Steel
Available Sizes:	1.5", 2", 2.5", 3", 4"
