

DECK DRAINS

134 standard & 136 2:1 ratio

Wager's standard deck drain is our 134 model. Each drain has a removeable strainer plate secured by three stainless steel flat head screws. All of our strainer plates are also cast to allow for extra thickness and strength on deck.

Our aluminum deck drains are also available with a highly polished strainer plate for the yachting industry.

The 136 series is a 2:1 ratio deck drain to allow for additional drainage. Cast in galvanized steel, it has a heavy-duty cast bronze strainer plate for added strength on deck.
