

ANTI-SYPHONIC VALVE

This is a vacuum relief and pressure sealing vent valve for marine plumbing systems. Using the valve eliminates the need to install individual vent piping to the atmosphere up through several decks. It means saving space, labor, and weight.

The valve works in two ways. First, it acts as a vacuum breaker. It opens at 1" of water vacuum and allows air to enter until the pressure inside the line and out are equalized. Then it closes.

Secondly, it serves as a vent sealing valve. It closes and seals at 1" of water. The valve is made of polyvinyl chloride which is completely impervious to marine corrosion. The rubber seals are protected from damage by a perforated stainless steel screen. It is made with 3/4" IPS threads for simple attachment to a gooseneck vent line. Bronze available upon request.

Specifications:

Anti-Syphonic Valve

Body:	PVC (Bronze on Request)
Connections:	Threaded
Gasket:	Neoprene
Sizes:	0.75"
