

STACK CHECK

Emissions Monitor

Wager, an industry leader in smoke opacity meters, proudly introduces it's new Stack Check Emissions Monitor. The Stack Check was created using the technology of our existing smoke indicating equipment along with new features that allow for easier calibration and alignment. By utilizing surface mount and micro-processor technology, we have also greatly reduced space and wiring requirements.

The Stack Check Emissions Monitor will also...

- ◆ Span a distance of 20 feet standard- Larger distances upon request
- ◆ Perform a self calibration
- ◆ Diagnose system errors, and automatically switch to "Awaiting Calibration State"
- ◆ Correct for ambient temperature and varying levels of ambient light
- ◆ Allow for multiple retransmission outputs... using 4-20mA as its standard
- ◆ Has an analog output and reset switch at the stack to allow for easy alignment and diagnostic capability
- ◆ Each Emissions Monitor has a 12 hour battery backup system
- ◆ This system can be utilized with existing stack penetrations created for the older Wager analog meters
- ◆ The Stack Check is capable of controlling a visual smoke indicator as well
- ◆ System can be rack mounted to save on space
- ◆ Quotations for installation and customized applications are available upon request
