

# 3000 MANHOLE

## ODOR CONTROL SYSTEMS

The Wager 3000 Manhole Scrubber effectively removes offensive odors emanating from street-level sewer manholes.

The collar of the scrubber rests just below the manhole cover. Gases enter through a mist eliminator and flow upwards into a canister containing approximately 50 LBS (23kg- 1.5 cu.ft ) of our engineered media and custom Power-4 permanganate as a polisher.

The unit also includes a unique one way valve to allow for water runoff during a rain event, but prevent gases from returning.

The Wager 3000 is constructed out of stainless steel to protect against the harsh environment. It can be fabricated to fit any size manhole.

HINGED DOOR FOR
